Go на практике

Цаль-Цалко Иван

Почему мы решили написать сервер на Go?

Особенности

- go прививает определенный **стиль**

```
bin/
  hello                               # command executable
  outyet                              # command executable
pkg/
  linux_amd64/
    github.com/golang/example/
      stringutil.a                  # package object
src/
  github.com/golang/example/
    .git/                                # Git repository metadata
    hello/
      hello.go                            # command source
    outyet/
      main.go                             # command source
      main_test.go                      # test source
    stringutil/
      reverse.go                          # package source
      reverse_test.go                     # test source
  golang.org/x/image/
    .git/                                # Git repository metadata
    bmp/
      reader.go                           # package source
      writer.go                           # package source
... (many more repositories and packages omitted) ...
```

```
// Method for printing - sorts the elements before printing.
func (s Sequence) String() string {
    sort.Sort(s)
    str := "["
    for i, elem := range s {
        if i > 0 {
            str += " "
        }
        str += fmt.Sprint(elem)
    }
    return str + "]"
}
```

Особенности

- передача **нескольких** значений в качестве результата

```
func (self ConfigManager) getById(id uint32) (error, meta.IMetaStruct) {
    item, ok := self.id2conf[id]
    if ok {
        return nil, item
    }
    return errors.New(fmt.Sprintf("Not found config by id: %d", id)), nil
}
```

Особенности

- функция **defer**

```
func GetExtIdById(id uint32) string {  
    conn, err := GetNewMainConn()  
    util.CheckErr(err)  
    defer conn.Db.Close()  
  
    shard_map := GetShardById(conn.NewSession(nil), id)  
    return shard_map.Ext_id  
}
```

Особенности

- обработка ошибок на **верхнем** уровне

```
func (self *rpcHandler) doRequest(req Request, writer Writer) {
    resp, err := handleRPC(req)
    if err != nil {
        logger.Log(fmt.Sprintf("Error: '%s'", err))
        writer.WriteErr(err)
        return
    }
    ...
}

func handleRPC(req Request) ([]byte, error) {
    ...
    players, err := loadPlayers(req)
    if err != nil {
        return resp, err
    }
    ...
}
```

Особенности

- обработка исключительных ситуаций (**panic**)

```
func (self *rpcHandler) doRequest(req Request, writer Writer) {
    defer func() {
        if err := recover(); err != nil {
            logger.Log(fmt.Sprintf("Error: '%s'", err))
            writer.WriteErr(err)
        }
    }()
    resp, err := handleRPC(req)
    ...
}

func handleRPC(req Request) ([]byte, error) {
    ...
    players, err := loadPlayers(req)
    CheckErr(err)
    ...
}

func CheckErr(err error) {
    if err != nil {
        panic(err)
    }
}
```

Особенности

- статически типизированный язык
- ошибки только в продакшене
- нельзя быстро поменять что-то в продакшене
:)

Utils

- go get
- gofmt
- golint
- go vet
- go test
- go install
- etc...

Utils

- go get

```
$ go get github.com/go-sql-driver/mysql
```

```
$ go get github.com/mkevac/gopinba
```

```
$ go get golang.org/x/net
```

```
import (
    "github.com/go-sql-driver/mysql"
    "github.com/mkevac/gopinba"
    "golang.org/x/net"
)
```

Utils

- gofmt

```
$ gofmt db/sharding.go
```

```
func (self *BitDB) StartTransaction() error {var err error  
self.Trx, err=self.DbSession().Begin()  
return err}  
  
func (self *BitDB) ReleaseTransaction() error {  
    if self.Trx != nil {  
        if err := self.Trx.Rollback(); err != nil {  
            return err  
        }  
    }  
    self.Trx = nil  
    return nil  
}
```

```
func (self *BitDB) StartTransaction() error {  
    var err error  
    self.Trx, err = self.DbSession().Begin()  
    return err  
}  
  
func (self *BitDB) ReleaseTransaction() error {  
    if self.Trx != nil {  
        if err := self.Trx.Rollback(); err != nil {  
            return err  
        }  
    }  
    self.Trx = nil  
    return nil  
}
```

Utils

- golint

```
$ golint ./secon.go
secon.go:739:1: exported function Filter should have comment or be unexported
secon.go:740:2: can probably use "var vsf []string" instead
secon.go:750:1: exported function Map should have comment or be unexported
secon.go:910:19: should drop = 0 from declaration of var ops; it is the zero value
secon.go:1177:6: don't use underscores in Go names; func worker_chan should be
workerChan
secon.go:1353:3: should replace i += 1 with i++
secon.go:1521:8: should omit type string from declaration of var a; it will be inferred from
the right-hand side
```

Utils

- go vet

```
$ go vet ./gamed/  
gamed/gamed.go:423: the cancel function returned by context.WithCancel should be  
called, not discarded, to avoid a context leak  
  
gamed/gamed.go:439: arg authorized for printf verb %d of wrong type: bool  
  
exit status 1
```

Utils

- go test

```
$ go test .
--- FAIL: TestFileSystemAvatar (0.00s)
    avatar_test.go:59: FileSystemAvatar.GetAvatarURL should not return an error
    avatar_test.go:63: FileSystemAvatar.GetAvatarURL wrongly returned
FAIL
FAIL    goblueprints/chat    0.011s
```

```
$ go test .
ok    goblueprints/chat    0.012s
```

Utils

- go test -bench=Counter

```
$ go test -bench=Counter -cpu=4,16
```

```

Chat

github.com/gorilla/websocket

github.com/garyburd/redigo/redis

- global rooms
- guild rooms
- private rooms

Chat

Chat

- handle incoming requests

```
func (h *chatHub) handleIncoming(cp *chatPacket) {
    if p, ok := cp.m.(*NetChatLogin); ok {
        h.handleLogin(cp.c, p)
    } else if p, ok := cp.m.(*NetChatRoomEnter); ok {
        h.handleEnterRoom(cp.c, p)
    } else if p, ok := cp.m.(*NetChatMsg); ok {
        h.handleMessage(cp.c, p)
    } else if p, ok := cp.m.(*NetChatCheckPrivates); ok {
        h.handleCheckPrivates(cp.c, p)
    } else if p, ok := cp.m.(*NetChatRoomExit); ok {
        h.handleExitRoom(cp.c, p)
    } else if _, ok := cp.m.(*NetChatLogout); ok {
        h.handleLogout(cp.c)
    } else {
        chlog(2, "unknown net message: %s", cp.m.CLASS_NAME())
    }
}
```

Chat

- subscribe to room

```
func (r *chatRoom) subscribeToRedis() chan bool {
    ready := make(chan bool, 1)
    chlog(0, "room '%s' subscribing to redis", r.key)
    if rdconn, err := getRedisFreshConn(); err == nil {
        r.psc = redis.PubSubConn{Conn: rdconn}
        r.psc.Subscribe("croompub:" + r.key)
        go func() {
            ready <- true
            close(ready)
            r.redisPump()
        }()
    } else {
        chlog(2, fmt.Sprintf("error: %v", err))
        ready <- false
        close(ready)
    }
    return ready
}
```

Chat

- broadcast message to all users in room

```
for {
    switch v := r.psc.Receive().(type) {
    case redis.Message:
        chlog(0, "got redis msg: len %v", len([]byte(v.Data)))
        go hub.handleBroadcastFromRedisRoom(r, []byte(v.Data))
    case redis.Subscription:
        // we don't need to listen to subscription messages,
    case error:
        chlog(0, "got redis error: %v", error(v))
        select {
        //in case we're done don't resubscribe
        case <-r.done:
            return
        //in case of error try to resubscribe to redis
        default:
            r.waitSubscribeToRedis()
        }
        return
    }
}
```

Cross compilation

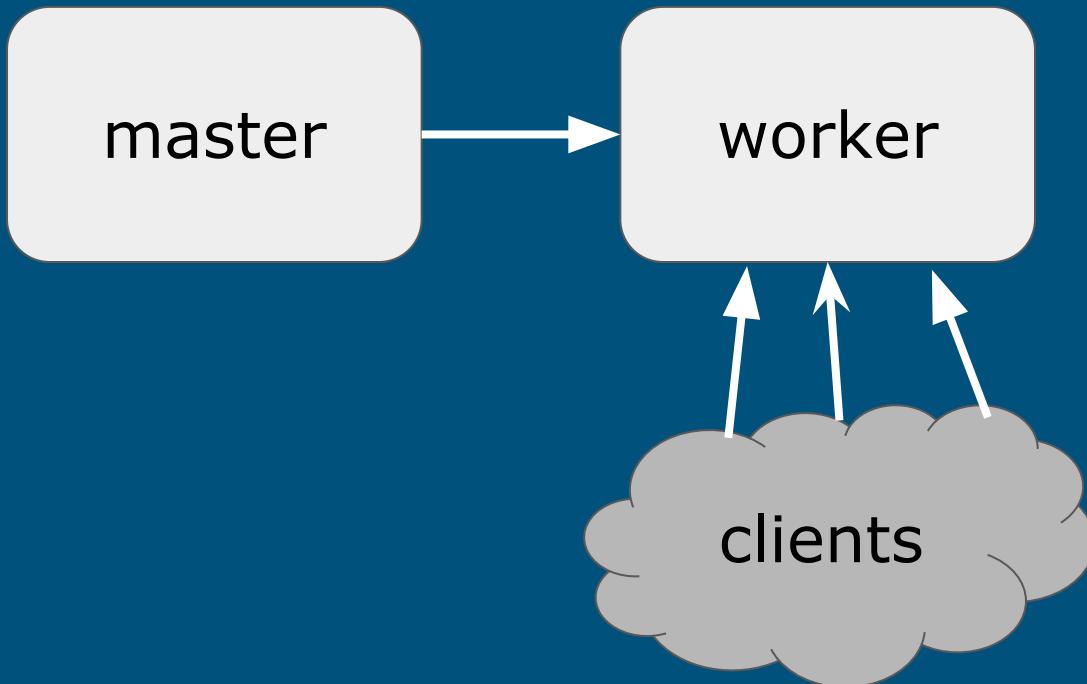

github.com/mitchellh/gox

```
$ gox -rebuild -output=./app -osarch="darwin/amd64" ...
$ gox -rebuild -output=./app -osarch="linux/amd64" ...
```

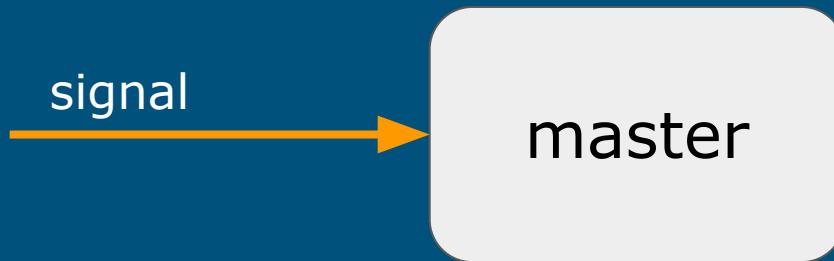

```
package pcre
/*
#cgo LDFLAGS: -lpcre
#cgo CFLAGS: -I/opt/local/include
#include <pcre.h>
#include <string.h>
*/
import "C"
```

```
$ gox -rebuild -output=gamed -osarch="linux/amd64" ...

Ошибки

- data race
- distribute mutex
- отправка данных в закрытый канал
- переиспользование переменных в условных операторах
- SelectBySQL(...).Where(...)
- переиспользование Wait group

Ошибки

- переиспользование переменных в условных операторах

```
var sum int = 0
var value int = 0

if true {
    value := 50
    fmt.Println("value =", value)
}

sum += value

fmt.Println("value =", value)
fmt.Println("sum =", sum)
```

Output:

```
value = 50
value = 0
sum = 0
```

Ошибки

- SelectBySQL(...).Where(...)

```
var ids []uint32

err = db().SelectBySql("SELECT id FROM raid").Where("guild_id = ?", guild.Id).LoadValues(&ids)

if (err != nil) {
    return err
}

db().DeleteFrom("raid_players").Where("raid_id IN ?", ids).Exec()
```

Ошибки

- переиспользование Wait group

```
go func() {
    for {
        self.wait_group.Wait()
        self.wait_group.Add(NOTIFICATION_QUEUE_CAPACITY)
        go self.storeNotification()
    }
}()

for {
    switch dtype := self.rdconn.Receive().(type) {
        case redis.Message:
            self.wait_group.Done()
        case redis.Subscription:
            self.log(fmt.Sprintf("subscribe to rd: %v", dtype))
        case error:
            // handle error
    }
}
```

```
gme/notification.go:97 +0xc5
panic: sync: WaitGroup is reused before previous Wait has returned
```
