

Доработка СПО по запросам образовательных учреждений

Коул Милена Ричардовна

ГАУ "Центр цифровизации образования"

г. Москва

Результаты доработок

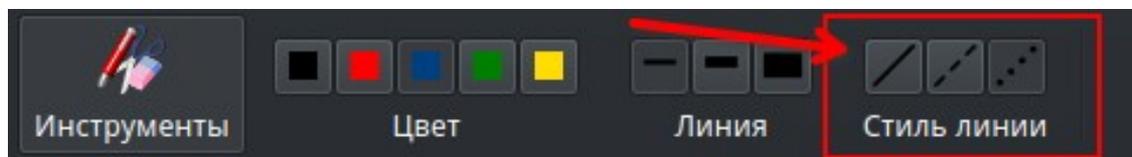

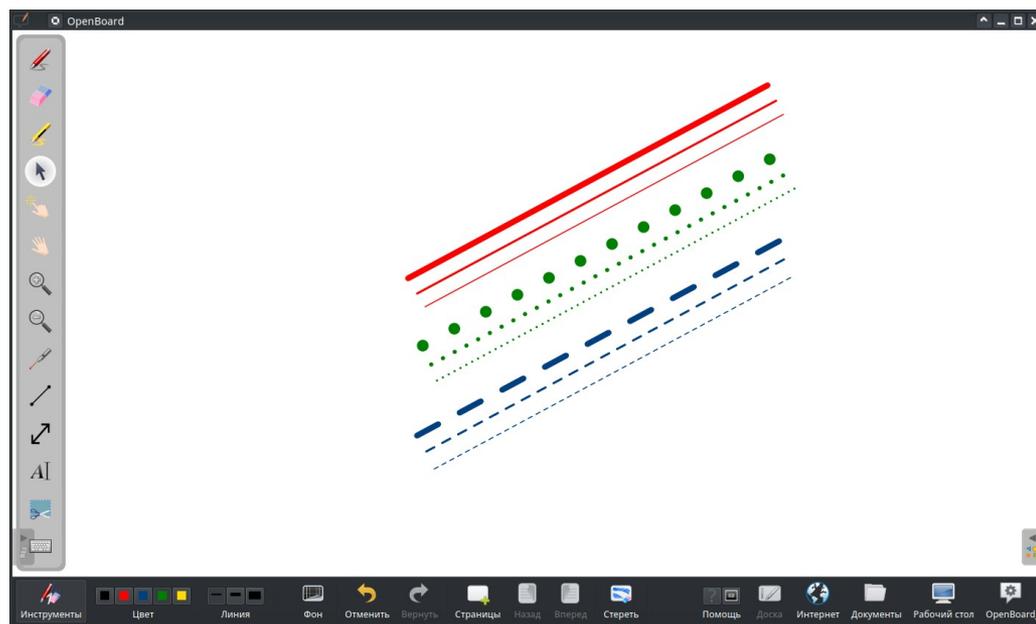

- Векторизация иконок;
- Сохранение размера сетки;
- Локализация;
- Возможность настраивать цвет фона;
- Корректное отображение в системе с темной темой;
- И пр.

Линии и векторы

Добавлены стили линий:

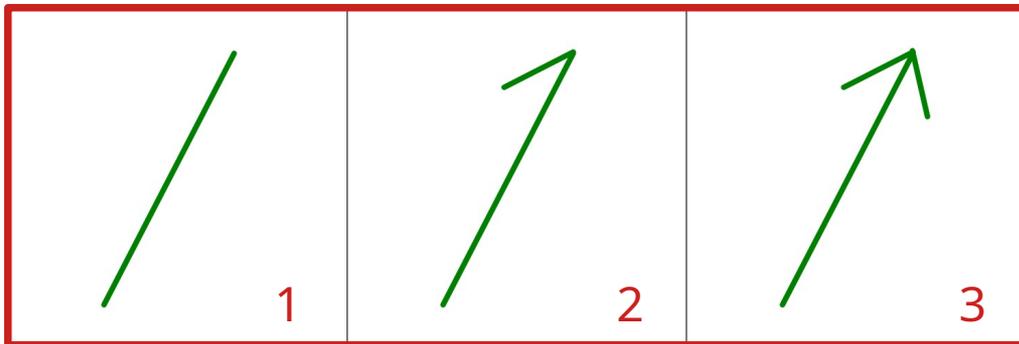

- Сплошная;
- Пунктирная;
- Пунктирная точками.

A screenshot of a GitHub comment by user kaamui, dated May 3, 2023. The comment is in Russian and discusses the removal of a feature from OpenBoard when it was forked from OpenSankoré. The user expresses appreciation for the open-source nature of the project and the community's involvement.

kaamui commented on May 3, 2023

Hi,

Thank you for the help and time you put on OpenBoard. A similar feature as what you did was removed, when the project got forked from OpenSankoré, to keep OpenBoard much simpler than its ancestor. For the same reason I cannot accept this pull request, sorry.

But I like what you did and am glad this project is open-source, and that you are able to modify and distribute a version of OpenBoard containing the changes requested by your school. I'm also grateful that you took the time to try to share your work with the community !

Запросы на добавление различных стилей для линии:

Dashed line / Alternative style of line #178

[Open](#) gagarine opened this issue on Nov 13, 2018 · 9 comments

gagarine commented on Nov 13, 2018 • edited

Some teachers are drawing dashed line "by hand". Perhaps would be nice to be able to have dashed style. I was thinking it can be activated by selecting it or by **holding** control key like "alt" while drawing the line.

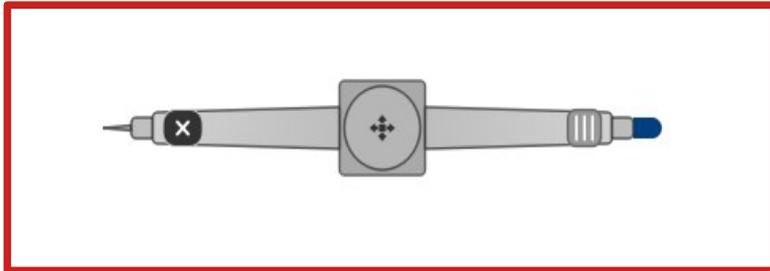

BruceMcF commented on Feb 23

I will add that this is the main feature preventing me from adopting OpenBoard.

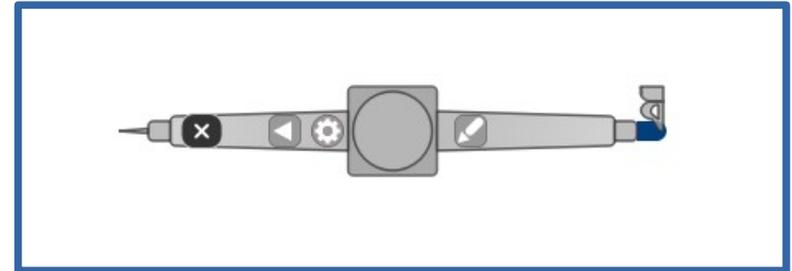

However, I will note that the dashed line I need is for the straight line tool ... it is to measure values from inside a graphical model down to the horizontal axis and across to the vertical axis. Students drawing graphical models by hand in face to face class exercise and open answer testing need a straightforward way to distinguish relations in the model and lines measuring results to axes. Open Board has good tools for drawing Demand and Supply models and labeling them, but not having a dashed line option for straight lines forces maintenance of two different set of PPTs for face to face and online class.

Hi!

This program is excellent but does not support multitouch. Are you going to put it in the near future?

kaamui commented on Oct 22, 2019

Member

Hello,

Due to our limited resources, we will not be able to prioritize on this. The main focus is actually to port OpenBoard to latest qt version, and to release OpenBoard 1.5.4 before the end of the year (which will contain some fixes, essentially).

Does this allow mutli-touch functionality on the tv's?[Question] #860

No, OpenBoard only supports single touch. Even things like "zoom with two fingers" are currently not supported.

Hi,

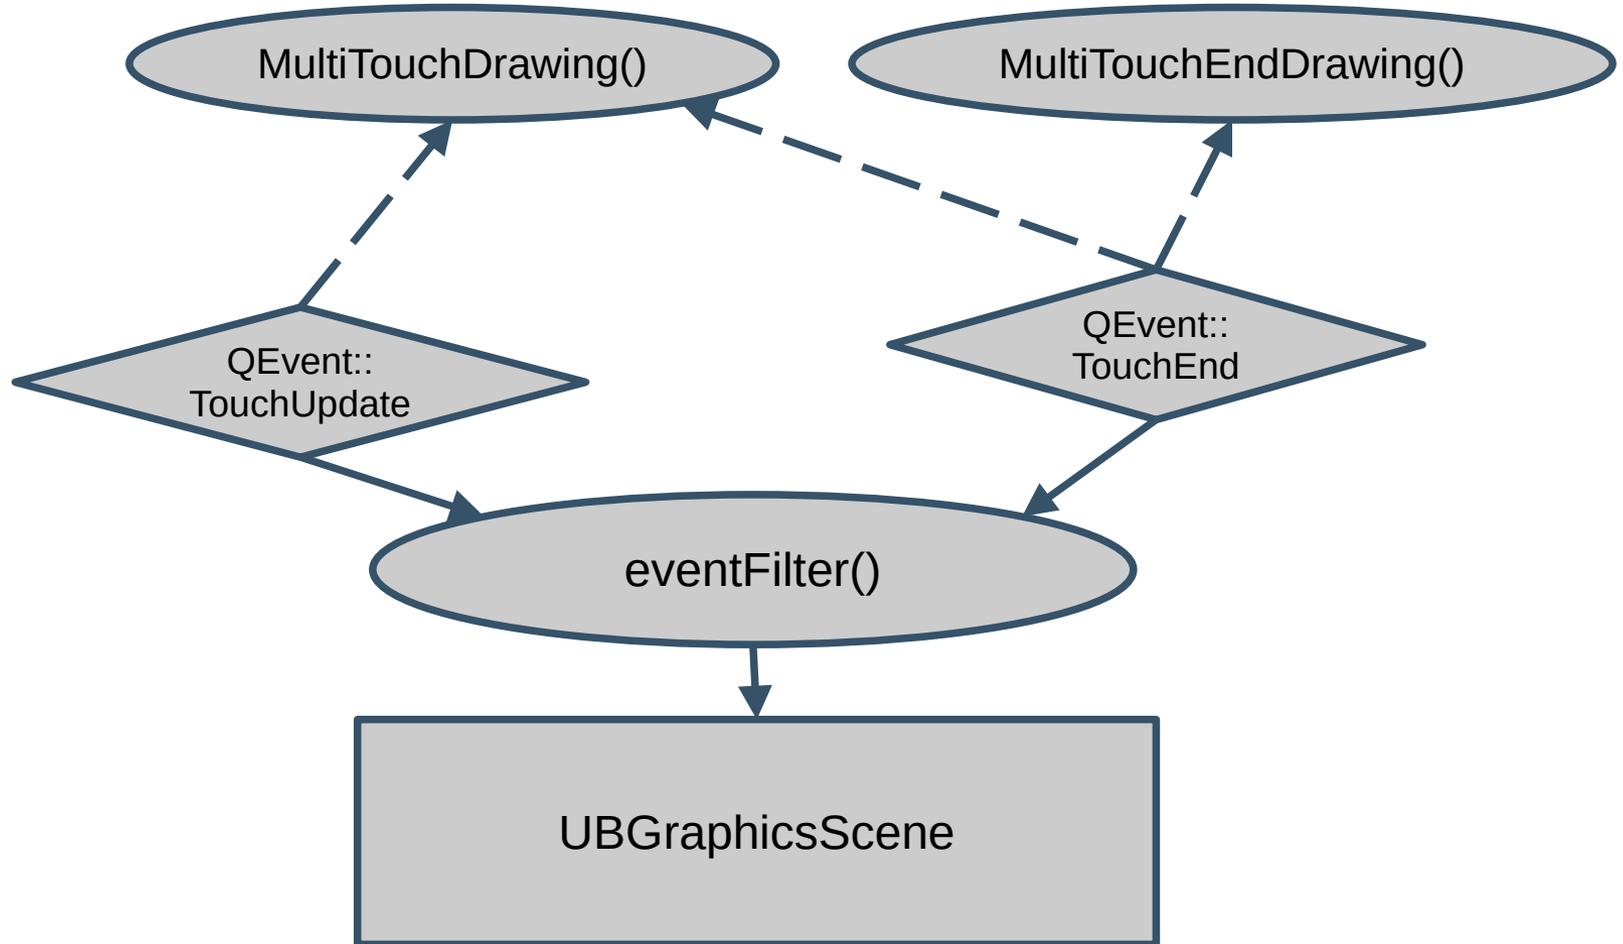

I'll just add that it is not planned at all because it is not a need expressed by our teachers in general.
